Step 3

## Nail and Wart Surgery Protocol

- **Step 1: Pre and Post Op Scrub**
  - a. Pre-Operative Care- Scrub the area before surgery to reduce risk of infection.
  - b. Post-Operative Care- Apply two pumps with warm water to a fresh washcloth and clean the surgical area twice daily. Let air dry or dry area with a clean cloth.
- **Step 2: Shoe & Insole Hygienic Refresher Spray**

Spray shoes, orthotics or insoles daily to reduce the risk of infection and re-infection.
- **Step 3: Bath & Shower Cleansing Spray**

Spray all bathroom floor surfaces as well as bathtub and/or shower daily to prevent cross contamination and re-contamination during active treatment of nail disease. Thereafter continue with normal cleansing of showers and bathroom surfaces.
